## BASIC-ABSTRACT:

A physiofunctional activator contg., as active substance, physioactive substance, which is extracted from virus-infected tissue.

The virus is vaccinia virus, cowpox virus, variola virus, paravaccinia virus, orthopox virus, tara pox virus or orf virus. The animals for obtaining the tissue is rabbit, sheep, goat, -pig, cow, horses, monkey, rate or mouse. The tissue is kidney, skin, lung, liver, muscle, renal gland, thyroid gland, brain, -nerve cell or blood or Hela cell. In the preparation of the substance, a virus-infected tissue is pulverized, and formed into a suspension together with a extract solvent (e.g. distilled water physiological saline solution, buffers) and stabilizers (e.g. glycerine), antiseptics (e.g. phenol), inorganic salts (e.g. sodium chloride, potassium chloride or magnesium chloride. The suspension is filtered and treated with heating, ultrasonic wave, organic solvent, or acid and bases for removal of protein, to obtain an extract contg. active substance, which is treated with activated charcoal or kaoline, for absorption of the active substance, which is treated with an eluting solution (e.g. water, methanol, ethanol or isopropanol) to obtain a solution, which is dried to form the active substance powder.

USE/ADVANTAGE - Activators for diseases caused from blood-circulation disorder (e.g. pain, or numbness).
